- PLC Developments

EXPERIENCE

TKS Solar Engineering 2022-Present

I am a senior software and electronic engineer at TKS Solar Engineering, where I specialize in developing cutting-edge solutions for the renewable energy sector. Here are some of my key accomplishments:

- Created large-scale automation software for full off-grid solar plants up to 1 megawatt, ensuring efficient and reliable operation.
- Developed a live monitoring service, allowing clients to view their system's data in real-time for enhanced performance monitoring.
- Designed and implemented SCADA software, providing additional custom functionalities tailored to the specific needs of our systems.
- Engineered an Energy Management System (EMS) that integrates all components for automation, serving as a custom PLC with customizable pin inputs and outputs.
- Developed a detailed LoRa radio network utilizing RS485 protocol for remote data transfers and custom functionality, enabling seamless communication across the system.
